

LatentOmni Example : AV Event Alignment (from DailyOmni)

Question: Which audio-visual pair coincided when the speaker mentioned 'number two, best soup in Southeast Asia, and also number two'?

GT: B

- A. Gulai with Indonesian
- C. Tom Yum with Thai flag

- B. Sinigang with Philippine flag
- D. Tom Kha Gai with Thai flag

LatentOmni: To determine which audio-visual pair coincided with the speaker mentioning "number two, best soup in Southeast Asia, and also number two," I need to identify the moment when the speaker says this specific phrase and observe the corresponding visual and audio elements $\langle \text{Unified_Latent} \times \text{latent_embeddings} \times \text{Unified_Latent} \rangle$. The phrase "number two" is spoken while the visual shows the number "2" on screen, accompanied by the Philippine flag and the text "Sinigang Philippines." The audio includes dramatic music, and the visual style matches the format used for other top soup entries. This confirms that the pairing of the number "2" with the Philippine flag and Sinigang is the correct match for the stated audio content. No other segment contains the exact phrase "number two" in the context of Southeast Asia's best soup. \boxed{B}
